Notes and Potential Issues

The following notes and warnings highlight missing or conflicting information which caused the validator to perform some guesswork prior to validation, or other things affecting the output below. If the guess or fallback is incorrect, it could make validation results entirely incoherent. It is *highly recommended* to check these potential issues, and, if necessary, fix them and re-validate the document.

Byte-Order Mark found in UTF-8 File.

The Unicode Byte-Order Mark (BOM) in UTF-8 encoded files is known to cause problems for some text editors and older browsers. You may want to consider avoiding its use until it is better supported.

Validation Output: 2 Errors

Line 5497, Column 213: required attribute "alt" not specified

...'/VGRIImages/expandBreadcrumbBtn.png' /> / <a href="/sv/...

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

Line 5516, Column 21: end tag for "ul" which is not finished

Most likely, you nested tags and closed them in the wrong order. For example <p>...</p> is not acceptable, as must be closed before <p>. Acceptable nesting is: <p>...</p>

Another possibility is that you used an element which requires a child element that you did not include. Hence the parent element is "not finished", not complete. For instance, in HTML the <head> element must contain a <title> child element, lists require appropriate list items (and require ; <dl> requires <dt> and <dd>), and so on.
