## Test your site every day - free tria

We will monitor your uptime and response time and if anything goes wrong we'll let you know. It's super easy – try us out!

Get started

#### **State Colors**

The following colors are used in the bars in the waterfall chart to indicate the different stages of a request.

DNS The web browser is looking up DNS information

SSL The web browser is performing a SSL handshake

Connect The web browser is connecting to the server

Send The web browser is sending data to the server

Wait The web browser is waiting for data from the server

Receive The web browser is receiving data from the server

### **Nobody Likes a Slow Website**

We built this Website Speed Test to help you analyze the load speed of your websites and learn how to make them faster. It lets you identify what about a web page is fast, slow, too big, what best practices you're not following, and so on. We have tried to make it useful both to experts and novices alike.

In short, we wanted it to be a easy-to-use tool to help webmasters and web developers everywhere optimize the performance of their websites.

#### **Feature Overview**

• Examine all parts of a web page – View file sizes, load times, and other details about every single element of a web page (HTML, JavaScript and CSS files,

3 of 4 2015-10-09 12:18

#### **Content Types**

The following icons are used to indicate different content types.

HTML document HTML Javascript JavaScript file CSS CSS file Image file

Text/plain Plain text document

Any other content type, for example flash files

Warning The request got a 4XX, 5XX response or couldn't be loaded

Redirect The request got a 3XX response and was redirected

#### Server Response Codes

To make it easy for you to differentiate between the HTTP response codes in the waterfall chart, we've color-coded the text and background of each URL.

URL 2xx The server responded with a successful code URL 3xx The request was redirected to another target URL 4xx A client error occured, for example 404 page not found

URL 5xx A server error occured, for example 500 internal server error

URL Error Connection error, no response from the server

images, etc.). You can sort and filter this list in different ways to identify performance bottlenecks.

- Performance overview We automatically put together plenty of performancerelated statistics for you based on the test result
- Performance grade and tips See how your website conforms to performance best practices from Google Page Speed (similar to Yahoo's Yslow). You can get
- some great tips on how to speed up your website this way.

   Trace your performance history We save each test for you so you can review it later and also see how things change over time (with pretty charts!). **Test from multiple locations** – See how fast a website loads in Europe, the
- United States, etc.
- Share your results We've made it easy for you to perform a test and share it with your friends, work colleagues or web host.

#### How it works

All tests are done with real web browsers, so the results match the end-user experience exactly. We use a bunch of instances of Google's Chrome web browser to load websites, record performance data, and so on. Tests are done from dedicated Pingdom servers.

### **About Pingdom**

Pingdom offers cost-effective and reliable server, network and website monitoring. We use a global network of servers to monitor our customers' sites 24/7, all year long. The service includes statistics for uptime and response time, and can send out alerts via SMS, email, and more.

Pingdom - Website Monitoring

#### **Pingdom Tools on your website**

If you like Pingdom Tools you can include a banner on your website that lets all your visitors use it. You add it with just a few lines of HTML code. The Pingdom Tools banner is available on our "Link to us" page.
